IPv4 Basic Debugging Challenge

Release 0.1

Thomas Liske

May 16, 2019

Contents:

1 Introduction

The *IPv4 Basic Debugging Challenge* is a collection of hypothetical network problems. The challenge is to narrow the issue down to the root cause while only having a limited access to the involved network infrastructure.

To improve your network debugging skills you will be able to prove or to disprove your working hypotheses using a virtual test environment.

For all scenarios a solution including it's approach is provided.

> **Warning:** There is no need to cheat by looking at the solution chapter. The root cause analysis in all scenarios can be solved!
